Subject: Grayson EIR

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. 800-1

As I understand it, pollution doesn't respect zip codes so I feel I am able to send this email to you to voice my opposition. Not to mention that I bring my daughter to Palmer Park on a regular basis and go to the Americana for daytime entertainment with her, therefore feel that this is an issue close to my heart. 800-2

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR. 800-3

Subject: Please reject plans to rebuild the Grayson natural gas power plant

Nov 19, 2017

Deputy Director of Community Development Erik Krause

Dear Deputy Director of Community Development Krause,

Yes to renewable energy and no to outdated unclean technology

As a Glendale resident, I'm writing to express my strong opposition to a new gas-fired power plant in our community. Please reject plans to rebuild the Grayson natural gas power plant in favor of clean energy alternatives.

Thousands of people live and work directly within the Grayson project's impact zone, which includes schools, daycare centers, homes for the elderly and offices. Glendale's air quality is already terrible--it's time to invest in an energy grid that can turn that around.

Furthermore, Glendale does not urgently need the power from this project. Even without Grayson, the city has enough energy to cover our daily needs most of the time. Our summertime spikes can be met with clean energy, just as other communities around California are doing.

The Grayson project leaves Glendale sitting on (and Glendale residents paying for) way more electricity than we need.

We have the means to power our city with renewable energy. Let's not tie ourselves to fossil fuel infrastructure that will harm our families and our checkbooks for decades. Cities across California are ditching fossil fuel power and we can too. It's time for Glendale to step into a clean air, clean energy future.

Sincerely,

Jose Torres

Subject: Grayson Power Plant: Go Away

Dear Mr. Erik Krause,

As a resident of Glendale and a GWP customer, I'm writing to voice my strong opposition to rebuilding and expanding the Grayson Power Plant. Rather than sinking \$500 million into a polluting fossil fuel facility, I urge you to seize the opportunity to make Glendale a showcase for clean energy alternatives. The list of concerns with this project is long.

? Emissions of carbon monoxide, nitrogen dioxide, sulfur dioxide, small particulate matter and other pollutants will increase across the board. This will worsen already bad air quality in an area that houses two elementary schools (Mark Keppel and Franklin), the Disney Creative Campus and Disney Children's Center, the residential neighborhoods of Pelanconi Estates and Moorpark, and popular outdoor spaces such as the John Ferraro Athletic Fields and Glendale Narrows Riverwalk.

? Greenhouse gas emissions, which are heating up our region and increasing risks of drought and fire, will increase by more than 415,000 tons of carbon dioxide each year. That's an increase of six times over the current levels, and equivalent to adding 90,000 cars to Glendale's roads!

? The plant would be built in an identified liquefaction zone. That makes the plant itself, and the gas piping and transmission systems, all highly vulnerable to a serious earthquake. Apart from the obvious safety risks, this raises questions about its ability to maintain reliable service in an emergency.

? Spending \$500 million on a single, large fossil fuel plant creates huge financial risks for Glendale ratepayers. With efforts underway in Sacramento to move the state to 100% clean energy by 2045, it's more likely than not that we'll be paying for this plant long after it's been forced to shut down.

Glendale doesn't even need this much power. Your own reports forecast falling demand for electricity in Glendale. If demand is falling, why would we need to build a plant that increases generating capacity by 33% as this proposal does?

This project would lock us into legacy technology that harms public health just at a time when the rest of the state is surging forward. I urge you to halt efforts to expand Grayson and commission a study of clean energy alternatives.

Sincerely,

Kevin Abrahamian

Subject: Please reject plans to rebuild the Grayson natural gas power plant

Nov 19, 2017

Deputy Director of Community Development Erik Krause

Dear Deputy Director of Community Development Krause,

I adamantly oppose the building of a power plant on the site of the Scholl Canyon Landfill! This landfill should have been CLOSED decades ago! Please help fight this proposal - for the well-being of current and future residents!!

816-1

As a Glendale resident, I'm writing to express my strong opposition to a new gas-fired power plant in our community. Please reject plans to rebuild the Grayson natural gas power plant in favor of clean energy alternatives.

816-2

Thousands of people live and work directly within the Grayson project's impact zone, which includes schools, daycare centers, homes for the elderly and offices. Glendale's air quality is already terrible--it's time to invest in an energy grid that can turn that around.

816-3

Furthermore, Glendale does not urgently need the power from this project. Even without Grayson, the city has enough energy to cover our daily needs most of the time. Our summertime spikes can be met with clean energy, just as other communities around California are doing.

816-4

The Grayson project leaves Glendale sitting on (and Glendale residents paying for) way more electricity than we need.

We have the means to power our city with renewable energy. Let's not tie ourselves to fossil fuel infrastructure that will harm our families and our checkbooks for decades. Cities across California are ditching fossil fuel power and we can too. It's time for Glendale to step into a clean air, clean energy future.

Dear Mr. Krause,

I'd like to express my opposition to Grayson repowering project. I've been a Glendale resident for 30 years.

State of California is known for it's pro environmental leadership and our city needs to be one of the leading examples on that not to go backward.

We can not afford having more pollution in our city. Natural gas is a fossil fuel and has great negative consequences.

The City of Glendale and GWP should bring more quality to the life of the city's people. By having more pollution, not only will jeopardize communities health but result in very unhappy and less productive life style.

I hope you will make the right decision that is best for our community's health.

Sincerely,

Knarik Sahakian

Subject: Grayson plant repowering project

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR.

825-1

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR.

825-2

Clean power alternatives exist and at this point in time it is irresponsible to choose otherwise from a health standpoint affecting not only citizens of Glendale but the broader NELA area; from a social standpoint - no doubt this would lower home values in the area surrounding the power plant, also directly impacting citizens of Glendale - and from a financial standpoint, as interest in investing in clean power is rising. So if the purpose of repowering the plant includes an intent to export power, you would be doing the city of Glendale a disservice in this regard also as over the next couple of decades companies and people align around maximizing access to clean power alternatives.

825-3

While I no longer live in Glendale I used to. This would not be a good move for the city. I call on you and the City to pause and consider the long-term effects of this current plan. You have the option of choosing to position Glendale as a leader in this next global effort to move to clean power - we are at that tipping point, though perhaps it's hard to see from within the industry. Or you have the option to choose to increase pollution emissions and leave that as your and the city's lasting legacy.

825-4

I now live in the broader NELA area, which would also be impacted by the increased pollution. I have family with sensitivities to airborne pollution in the area already. In addition to the awful effects on growing children and the increased risks of cancer especially in the immediate area of the plant, are you aware that a person with asthma can die from a severe attack? More pollution in the air equals a higher daily level of irritation of the lungs, which means a higher likelihood of some daily occurrence - a truck passing by with exhaust that leaves even healthy people struggling, or a cloud of cigarette smoke lingering outside a business - pushing them past the threshold for a severe attack. If they are unable to get treatment in time, they will stop breathing. Just a few months ago this happened to a beloved member of my community, a worker at a restaurant I frequent. He stopped breathing and suffered such severe brain trauma that he passed away, far too young.

825-5

Your choices directly impact the lives of real people and families. I urge the city of Glendale to do the responsible thing - the right thing for your community and for the broader NELA area. If repowering the plant would be important for the community, choose clean power options.

825-6

Regards,

Lisa in Los Angeles

Subject: Please reject plants to rebuild the Grayson natural gas power plant

Nov 19, 2017

Deputy Director of Community Development Erik Krause

Dear Deputy Director of Community Development Krause,

The City is over populated, The Smog is Sooo.. obviously in place which can be seen of the fwy 210 going west into the 2 fwy. Mankind must know there limits our children life's are in stake.We need clean clear air a healthy Glendale is a better and safer tomorrow.All lives matter

828-1

As a Glendale resident, I'm writing to express my strong opposition to a new gas-fired power plant in our community. Please reject plans to rebuild the Grayson natural gas power plant in favor of clean energy alternatives.

828-2

Thousands of people live and work directly within the Grayson project's impact zone, which includes schools, daycare centers, homes for the elderly and offices. Glendale's air quality is already terrible--it's time to invest in an energy grid that can turn that around.

828-3

Furthermore, Glendale does not urgently need the power from this project. Even without Grayson, the city has enough energy to cover our daily needs most of the time. Our summertime spikes can be met with clean energy, just as other communities around California are doing. The Grayson project leaves Glendale sitting on (and Glendale residents paying for) way more electricity than we need.

828-4

We have the means to power our city with renewable energy. Let's not tie ourselves to fossil fuel infrastructure that will harm our families and our checkbooks for decades. Cities across California are ditching fossil fuel power and we can too. It's time for Glendale to step into a clean air, clean energy future.

828-5

Sincerely,

Luis Gomez

Subject: Re: draft EIR for Grayson

Mr. Krause,

I am writing to criticize a specific aspect of the draft Environmental Impact Report for the "re-powering" of Grayson. At numerous points in the document, Stantec tries to make hay of the fact that solar energy is not generated at night (well...DUH!!). They try to spin this into an excuse for not seriously looking into alternatives that involve solar and/or batteries.

However, solar is not a significant component of GWP's portfolio of sources. In fact, the most recent "power content label" for the city of Glendale (<http://www.glendaleca.gov/government/city-departments/glendale-water-and-power/the-environment/power-content-label>), shows that solar is so little used by GWP that its share of the total rounds to ZERO percent! It makes no sense to me that the intermittent nature of an energy source almost completely unused by Glendale is somehow a problem for Glendale solutions that involve batteries, say.

Stantec clearly is telling GWP what it wants (and is paying) to hear. I call on the City to pause the CEQA process and immediately commission a more serious study of clean energy alternatives for powering Glendale. This study should be conducted by a group with strong clean energy credentials, such as NREL or E3, and not by Stantec.

Sincerely,

MIN-JUNG SONG

To: Krause, Erik
Subject: Please reject plants to rebuild the Grayson natural gas power plant

Nov 20, 2017

Deputy Director of Community Development Erik Krause

Dear Deputy Director of Community Development Krause,

This is a wrong decision which would result in an unhealthy environment for the people of Glendale and surrounding cities. It could even end up with catastrophic consequences. When many countries in Europe, China and India are heavily investing on futuristic and technically sound renewable energy projects, investing our tax money in this old and harmful technology is a treacherously backward decision.

853-1

As a Glendale resident, I'm writing to express my strong opposition to a new gas-fired power plant in our community. Please reject plans to rebuild the Grayson natural gas power plant in favor of clean energy alternatives.

853-2

Thousands of people live and work directly within the Grayson project's impact zone, which includes schools, daycare centers, homes for the elderly and offices. Glendale's air quality is already terrible--it's time to invest in an energy grid that can turn that around.

853-3

Furthermore, Glendale does not urgently need the power from this project. Even without Grayson, the city has enough energy to cover our daily needs most of the time. Our summertime spikes can be met with clean energy, just as other communities around California are doing.

853-4

The Grayson project leaves Glendale sitting on (and Glendale residents paying for) way more electricity than we need.

We have the means to power our city with renewable energy. Let's not tie ourselves to fossil fuel infrastructure that will harm our families and our checkbooks for decades. Cities across California are ditching fossil fuel power and we can too. It's time for Glendale to step into a clean air, clean energy future.

853-5

Subject: existing location of power plant

I just got back from a long vacation and became aware of the proposed upgrading construction of the existing power plant. I have expressed concern to past council members regarding the location of the power facility because it is sited on a state designated liquefaction potential zone on official maps prepared by the State Geological Survey. I am very familiar with such designations because I was a former member of the State Mining and Geology Board that established the policy and law for these hazard areas throughout California. My interest as a Glendale resident that this matter be carefully evaluated by the technical consultants the city hires. The present plant location is in an area of historically high groundwater and unconsolidated alluvial sediments associated with the Los Angeles river.

Subject: Please make the Grayson Repowering Project improve local air, not worsen it

Dear Mr. Krause et al. We are writing to express our strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. We find it disheartening and inexplicable that you would try to preserve and expand outdated dangerous power solutions instead of spending the effort and funds on clean - or at least cleaner - energy alternatives. It is outrageous that you would impose this backward thinking and its results on an unwitting public. We call on the City to pause the CEQA process and immediately commission an independent study of for powering Glendale, taking into account the potential effects on air quality and health. This study should be conducted by experts (e.g., NREL or E3), not by the drafters and participants on the Grayson EIR. Regards, Ron and Ronni Scardera

Subject: Grayson Power Plant Project
Importance: High

Dear City Council Members and Mr. Krause,

I am writing to express my concerns about the Grayson Power Plant “repowering.”

Besides being a longtime Glendale resident, I am one of the thousands of individuals who work within a half-mile radius of the plant. The increase in harmful emissions would impact the health of those who work near the plant, and yet the City has not deemed it necessary to notify them. There should be a legal requirement to post a sign informing (and warning) those who of us who spend 40+ hours per week near the plant. If I were building a new house, I would be required to post a sign notifying those nearby of my plans; why isn’t a far larger project obligated to do so?

864-1

Aside from the lack of public notice, there is the issue of the Grayson debate itself. Although we have heard alarmist rhetoric on both sides of the argument, there is much common ground to explore. No one is suggesting that the plant be closed or that Glendale should rely solely on power from renewable sources. Nor is anyone disputing the EIR that reveals the substantial increase in hazardous pollutants that the project would create. And I’m sure everyone agrees that \$500 million dollars in bond interest will a hefty sum for struggling families to pay.

864-2

Given the high cost and potential impact of the Grayson project, it seems only prudent to reevaluate the plan to look for a compromise that balances the energy needs of the City with the cost and environmental footprint of the project. We look to you our leaders to think strategically and develop a the less impactful option that will give Glendale’s residents and workers the power they need without undue environmental impact or expense.

864-3

Sincerely,

Rondi Werner

Subject: Please reject plants to rebuild the Grayson natural gas power plant

Nov 19, 2017

Deputy Director of Community Development Erik Krause

Dear Deputy Director of Community Development Krause,

Hellllllllooo NO. NO NO NO NO NO.

As a Glendale resident, I'm writing to express my strong opposition to a new gas-fired power plant in our community. Please reject plans to rebuild the Grayson natural gas power plant in favor of clean energy alternatives.

Thousands of people live and work directly within the Grayson project's impact zone, which includes schools, daycare centers, homes for the elderly and offices. Glendale's air quality is already terrible--it's time to invest in an energy grid that can turn that around.

Furthermore, Glendale does not urgently need the power from this project. Even without Grayson, the city has enough energy to cover our daily needs most of the time. Our summertime spikes can be met with clean energy, just as other communities around California are doing.

The Grayson project leaves Glendale sitting on (and Glendale residents paying for) way more electricity than we need.

We have the means to power our city with renewable energy. Let's not tie ourselves to fossil fuel infrastructure that will harm our families and our checkbooks for decades. Cities across California are ditching fossil fuel power and we can too. It's time for Glendale to step into a clean air, clean energy future.

Sincerely,

Rubina Arshakian

Subject: Grayson EIR

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. 868-1

The plan would result in substantially higher health risks to residents of the entire area, including those outside of your immediate jurisdiction. As a resident of Silver Lake, I count myself as one such resident. Furthermore, the plan would result in higher electric bills, not lower, because the loan repayment is directly equal to their net profits. When they realize they have to make money, there will only be one group they can turn to: their customers. 868-2

So, I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR. 868-3

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR.

869-1

As a resident and small business owner in North East Los Angeles, and a parent of two young children, I am deeply concerned with the proposed Grayson Power Plant. I believe ANY changes to the quality of our environment requires those who will be directly affected to have a say. I know that the power plant will have no positive benefit to the North Los Angeles community, but it will have direct negative impact. I care about what air my kids breathe, and I am deeply saddened that the decision to move forward did not take into consideration our POV. If you continue to proceed, we residents will band together to take legal action against Grayson Power Plant. The coalition of parents in NELA are strong, vocal, and are deeply committed to continuing to make this part of Los Angeles (I consider Glendale to be part of this community) the best place to live in LA. Grayson power plant will change that quality.

869-2

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR.

Dear Glendale City Council,

We Glendale citizens believe that it is a huge mistake to expand the dirty fossil fuel driven Grayson power plant as the City Council wishes to do. As citizens and residents of Glendale, we disapprove of the selfish and greedy plan to expand the Grayson power plant, which would increase the air pollution output by nearly 700%. This plan will only increase the GWP's profit margins at the expense of Glendale's residents' health.

877-1

Subject: Grayson Power Plant Expansion

I am writing to express my disappointment to learn that the Grayson Power plant is in the process of expanding, bringing increased air pollution to our area. 883-1

We moved from the Bay Area to the NELA/Glendale area in June 2017. I was an active member of the board of Bay Area for Clean Environment, a non-profit group that put in many hours trying to reduce pollution there, so I am well aware of the health risks resulting from air pollution. My husband suffers from COPD, and we would have never moved to an area that knowingly was planning to increase its pollution levels by expanding a power plant using old-fashioned "dirty" energy.. 883-2

My home town, Cupertino, participated in the Community Choice Clean Energy program. <http://newsroom.ucla.edu/releases/community-choice-is-transforming-the-california-energy-industry> and I would hope that in addition to not approving the Grayson Plant expansion, an area like Glendale would strive to further its reputation as an attractive community to live in by exploring and embracing the use of cleaner energy sources. 883-3

The bottom line is that if more energy is needed, it should come from clean energy sources, not expanding a higher-polluting power plant. Citizens count on their community leaders to put their health above financial interests, so I ask you to do all you can to move this community in a healthier direction. 883-4

Thank you!

Terri Hoornstra

Subject: Power plant expansion

Hello Mr.. Krause-

I am writing to you about my concern regarding the expansion plan of the Grayson Power plant.

I am opposed to this expansion as a resident of Glendale for many reasons. While there are many health concerns surrounding this proposed project, my largest concerns rests on the amount of waste of time, energy, effort and money to expand the plant when it's clearly not needed.

Please see the article below as a reference to why we do not need, at this time, the expansion of the power plant in our own back yard.

Subject: Stop Grayson Expansion

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. 885-1

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR. 885-2

Regards,

Tess Lynch

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. 887-1

I live in Atwater Village right next to the border of Glendale and frequently take my young children to parks and restaurants in Glendale. Pollution doesn't respect city boundaries - the dirty energy from Grayson will affect my children in our home and where we play. 887-2

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR. 887-3

Subject: Grayson EIR

Dear Mr. Krause,

I am writing as a prominent local real estate agent and 12-year Glendale homeowner who has brought in many buyers who would have otherwise purchased in Silver Lake and Eagle Rock to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. 888-1

New homeowners are drawn to Glendale's exceptional walkability, great schools and beautiful natural surroundings. This dirty plant will not do that. The city will lose so much as these families move out (along with their property taxes) fearing for their children's health. With all of Glendale's resources and dozens of new modern projects being built, surely the city can also embrace the future by adopting clean energy. 888-2

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale. This study should be conducted by a group such as NREL or E3 with strong clean energy credentials and not by the consultants who have been working on the Grayson EIR. 888-3

Regards,

Vanessa Yan, Glendale

I am 14 and not yet old enough to vote. But I am certainly old enough to care. Expanding the Grayson Power Plant will cause so much damage to the environment through pollution and will contribute to global warming.

Why would you consider doing something so risky? Don't you care about the air that my peer and I, as well as our children someday, will breathe?

Please vote NO!

Subject: Please reject plans to rebuild the Grayson natural gas power plant

Nov 20, 2017

Deputy Director of Community Development Erik Krause

Dear Deputy Director of Community Development Krause,

My family lives close to this bad idea for power. Please think of me and my family and do the right thing in focusing on Clean Energy. The world is over the gas bridge, and Glendale should join us.

894-1

As a Glendale resident, I'm writing to express my strong opposition to a new gas-fired power plant in our community. Please reject plans to rebuild the Grayson natural gas power plant in favor of clean energy alternatives.

894-2

Thousands of people live and work directly within the Grayson project's impact zone, which includes schools, daycare centers, homes for the elderly and offices. Glendale's air quality is already terrible--it's time to invest in an energy grid that can turn that around.

894-3

Furthermore, Glendale does not urgently need the power from this project. Even without Grayson, the city has enough energy to cover our daily needs most of the time. Our summertime spikes can be met with clean energy, just as other communities around California are doing.

894-4

The Grayson project leaves Glendale sitting on (and Glendale residents paying for) way more electricity than we need.

We have the means to power our city with renewable energy. Let's not tie ourselves to fossil fuel infrastructure that will harm our families and our checkbooks for decades. Cities across California are ditching fossil fuel power and we can too. It's time for Glendale to step into a clean air, clean energy future.

894-5

Sincerely,

Adriano Martinez

Los Angeles, CA 90027

Subject: GRAYSON ENVIRONMENTAL REPORT request

Mr. Krause/honorable Council members:

This will serve to register my strong opposition to the Grayson repowering project in our city, and to respectfully request that the CEQA Process be stopped so an independent study of clean energy alternatives for Glendale can be completed.

Ideally, the study should be conducted/completed by individuals with strong clean energy credentials. No, I did not wade through all 5,00 pages of the Sept 2017 Draft EIR but I am aware of the main points outlined in this Environmental report.

896-1
896-2

Respectfully submitted,

Alex Acevedo
Riverside Rancho

Subject: OPPOSITION TO EXPANSION OF GRAYSON POWER PLANT!!

Dear Mr. Krause,

I am writing to express my strong opposition to the Grayson repowering project as outlined in the September 2017 Draft EIR. 899-1

I believe this is a short-sighted proposal, without regard for the health of the community or the well-being environment, which will only burden consumers in the future. Please explore renewable energy options, or the possibility of purchasing surplus power from other districts, which are in abundance. It is unconscionable to pursue this project as proposed! 899-2

I call on the City to pause the CEQA process and immediately commission an independent study of clean energy alternatives for powering Glendale.
